Addressing Ethical Standards: Mentor Involvement in Research Misconduct

Between 2004 and 2005, the ASPB News published a handful of articles addressing the most common types of ethical misconduct in publishing (http://www.aspb.org/newsletter/ethicalstandards.cfm). An interesting new study, published in July in the journal Science and Engineering Ethics (http://www.springerlink.com/content/70w5wu2142w6151g/?p=3ae5f3fe93c4cd6952337857f55e3c2&pi=4) and discussed in an article in the August 29 issue of the Chronicle of Higher Education (CHE; http://chronicle.com/daily/2008/08/4405n.htm), investigates the extent to which mentors are involved in promoting responsible research in cases of research misconduct. The authors reviewed the U.S. Public Health Service misconduct files of the Office of Research Integrity. They explored the role of the mentor in these cases on such behaviors as review of source data and teaching of research standards. They found that nearly three-quarters of the mentors had never examined the trainees’ lab results, and two-thirds never taught the trainees standards for properly keeping lab notebooks. They concluded that many mentors were poorly prepared to educate trainees about ethics. Further, as noted in the CHE article, many scientists were in fact poor role models because they themselves engaged in possibly unethical research practices.

Scientists Who Cheated Had Mentors Who Failed to Supervise Them

By Jeffrey Brainard

When young scientists fake results, their mentors—senior researchers who are supposed to train them—have neglected their supervisory responsibilities. A new study of scientific trainees caught cooking their data found that in three-quarters of the cases, their mentors had never examined the trainees’ laboratory results. And two-thirds of the
